

Summer Internship 26 Instructions Document

Assalam o Alaikum Interns,

As you have already been assigned your respective modules, please make sure to read your module carefully during this week. While going through it, try to understand the overall idea, think about the possible approach, and note down any questions or suggestions that come to your mind and identify the relevant course(s) (minimum 30 hours) since **during the 1st week you are required to learn the relevant content regarding your assigned modules.**

We will be conducting an Orientation Session soon, where we'll explain the complete workflow and discuss how everything will be managed throughout the internship.

Below is a detailed description of each requirement and its purpose.

1. Maintaining Time Sheets on Jibble

- **What it is:** Jibble is a digital time-tracking application used to log your daily working hours.
- **Its use:** You must use Jibble to clock in and out daily. This tool provides visibility into your attendance and ensures that you are meeting your required internship hours. Accurate time tracking is a prerequisite for your successful internship completion.

2. Version Control and Code Deployment on GitHub

- **What it is:** GitHub is a cloud-based platform used for version control and collaboration, allowing multiple developers to work on the same codebase simultaneously without overwriting each other's work.
- **Its use:** All project code must be hosted, updated, and deployed via your team's designated GitHub repository. You must commit your code regularly with clear, descriptive commit messages. This ensures code security, progress tracking, and seamless integration.

3. Self-Assessment Document

- **What it is:** This is an individual evaluation document where you reflect on your own performance, technical growth, and challenges faced during a specific period.
- **Its use:** You will use this document to honestly critique your output, identify areas where you need support, and track your personal development throughout the internship. It serves as a tool for your mentors to gauge your individual progress.

4. Weekly Progress Report (WPR)

- **What it is:** A structured report submitted at the end of each week summarizing the tasks you have initiated, completed, or deferred.
- **Its use:** The WPR keeps management and your project leads aligned with your pace. It highlights what milestones were achieved during the week and flags any blockers or delays that need to be addressed.

5. Weekly Recording of Team Collaborations and Minutes of Meetings (MoM)

- **What it is:** A documented record of all internal team discussions, design alignments, decisions made, and tasks allocated during your weekly meetings.
- **Its use:** Documenting your collaborations and MoM ensures accountability within the team. It prevents miscommunication, keeps absent members informed, and serves as a historical record of why certain project decisions were made.

6. Use of Scrum / Kanban on GitHub

- **What it is:** Scrum and Kanban are Agile project management frameworks. GitHub Projects provides boards (using columns like "To Do," "In Progress," and "Done") to visualize workflow.
- **Its use:** Your team must use GitHub Projects to create and manage your Kanban/Scrum boards. You will map out your module deliverables into specific tasks, assign them to team members, and move them across the board as work progresses. This maintains transparency regarding project velocity.

7. Medium.com (Compulsory for AI Module)

- **What it is:** Medium is a popular online publishing platform used to share technical articles, tutorials, and case studies.
- **Its use:** **For interns assigned to the AI Module, publishing on Medium is mandatory.** You are required to document your technical approaches, algorithm implementations, or project case studies in well-written articles. This builds your professional portfolio and demonstrates your ability to communicate complex technical concepts effectively.

Wishing you all a productive and successful internship.

Best regards,

Internship Management Team

Urgent To-Do List

1. **Identifying relevant courses (minimum 30 hours) and fill the survey**
Link: [Google Form](#)
2. Set up and login to Jibble for daily timesheet management.
3. Set up your Google Drive folder (We have already given access to your folders) for maintaining internship documentation.
4. Ensure access to all required platforms (GitHub, Medium if applicable, Slack).

What is Course Selection?

Course Selection is selecting relevant courses as per assigned modules to learn the required technologies and skills for completion of assigned tasks.

For example if someone have selection Intelligent Hint System then the courses may include: **(Backend/API Integration)** / NLP / LLMs
